Some advantages of Silverstripe CMS over Easyedit CMS

ADVANCED ADMIN CONTROLS

» Multiple users, with access level privileges

» To-do lists can be saved for every page

» Reports and tracking of all activity on in the system - who edited what and when.

» Version history / backup saved for every individual page, easily rollback to previous versions.

CONTENT EDITING IMPROVEMENTS

No more sections
All your content for each page can be controlled in one area. Unlimited images can be placed accurately without he need to add new sections. This eliminates confusion and makes editing even more intuitive.

Multiple heading styles
Paste from Word, as well as paste as plain text facilities (removing unwanted styling)

Add Flash
Flash can be added directly to you pages

Tables!
Add information tables and easily control the table rows/cells layout within your content.

Undo!
Undo/redo buttons have been added. Undo when editing on a web application - Finally!

Symbols
Easily add symbols within your text using the symbol list/finder.

Improved link handling
Easily link text to any page on your site, to any specific area on any page (see anchor links below), to any email address, any other website or to any file for download.

New Anchor links
As well as linking to any page on your site, you can specify an anchor point on that page to jump to. Anchors can be added easily to mark 'jump to' points on pages.

SEARCH ENGINE OPTIMISATION (SEO)

» Full Meta Tag Control (for all pages)

» Auto and custom URL re-naming control (all pages)

» Google sitemaps generation and advanced control

FILE MANAGEMENT

Batch upload: upload multiple files and images together.

Files and images repository, listing all your files and images and makes them easily available for repeat use throughout your site. Clearly displayed, your files and images can be organised within different folders if you wish.

Note: You can still simply upload an image directly from your PC to display on your site in one simple step (you don't have to go through the file repository)

Plus more details (see what files are being used and all pages that have links to them)

ALLOW PUBLIC COMMENTS

You can allow comments to be added on any page (just like a blog) and full comment moderation/approving and spam control is included.

OPEN SOURCE

Some of the advantages of open source include:

Reduced vendor lock-in
Because of the nature of open source development, other developers are able to work on the same code base and you are no longer tied to, or reliant on one particular company for all your future website developments.

Regular updates
Security updates are released as required, as well as new features and modules and, because of the community development, as the web changes the software will be quickly updated.

Community support
Silverstripe has a large and growing community which means there are online help guides and forums for support questions monitored by other users and developers.
